

Taiwan Guidelines for TB Diagnosis & Treatment

8th edition | Effective 2025-09-01 | Division of Chronic Infectious Diseases

SAMPLE / DEMO ONL

Sample cover and table of contents

Chapter 1 Diagnosis

Molecular rapid testing (incl. rifampin resistance genes) as first-line test for all suspected cases.

Chapter 2 Drug-susceptible TB

2HRZE/4HR remains standard; 4-month short regimen may be considered for eligible patients aged 12+.

Chapter 3 Drug-resistant TB

All-oral short regimen (about 6 months) preferred for RR-/MDR-TB; injectables no longer routine.

Chapter 4 Latent TB infection

Regimens 9H, 4R, 3HP, 3HR; new: 1HP (28 daily doses, aged 13+).

Chapter 5 Special populations

Children, pregnancy, HIV, diabetes, kidney and liver disease; rifamycin drug interactions.
