

Taiwan CDC Press Release (SAMPLE)

Released 2026-09-21 | Division of Acute Infectious Diseases

SAMPLE / DEMO ONLY

ILI peak declared: people aged 65+ with flu-like symptoms can receive government-funded antivirals without a rapid test

Emergency and outpatient visits for influenza-like illness (ILI) have risen for 4 consecutive weeks and are above the epidemic threshold. The ILI peak period starts today (2026-09-21).

What changes (Article 3 of the eligibility criteria):

- Aged 65 or older with ILI symptoms: physicians may prescribe directly; no positive rapid test needed.
- Children under 5: a positive rapid test is still required.

Advice:

- Antivirals work best within 48 hours of symptom onset.
- Older adults with fever, cough or body aches should see a doctor early.
- Hotline: 1922 (from abroad +886-800-001922).

Chart (sample): weekly ILI visit rate, see chart-ili.svg on the press release page.
